 Leicestershire, UK

## Summary

I'm a logical, methodical, and detail-oriented individual who enjoys breaking complex problems into smaller, manageable steps. I'm hard-working and driven focused on self improvement, always aiming to deliver my best and meet my responsibilities. My experience in both technical and customer-focused roles has helped me communicate clearly while maintaining precision in process-driven environments. I prefer Structured environments but I am confident in my ability to adapt to any environment. I take pride in my ability to think creatively, learn quickly, spot patterns, and absorb new information effectively.

## Technical Skills

### Languages

- C# (6 Years)
- Python (8 Years)
- C++ (5 Years)

### Backend & Systems

- API integration (Gmail API, OpenAI API)
- Automation pipelines & workflow design
- Data processing & Transformation
- modular & Scaleable system architecture

### Data & Analysis

- Structured data handling
- Data cleaning, analysis and visualisation
- statistical methods (regression Analysis)

### Tools & Technologies

- Unity, unreal engine
- Github, BitBucket
- Debugging, profiling, and performance optimisation

### Concepts

- System design & data flow
- Performance optimisation
- Reliability & maintainability
- Scalable Architecture

## Education

### Falmouth University

(Sept.2022 – July 2025)  
BSc (Hons) Computing for Games  
High 2:1 Upper Second-Class  
Honours

## Experience

### Perchang.com - London, UK

2023

#### Studio Assistant

- Collaborated with multidisciplinary teams in a professional environment.
- Learned how to optimise performance from a system I was unfamiliar with.
- Detected and analysed a bug; learned how to understand and interpret an AI system.
- Observed and learned about the realities of production as opposed to the theoretical.
- Gained hands-on experience in a real-world setting while maintaining a professional attitude.
- Worked under a Non-Disclosure Agreement, demonstrating professionalism and the ability to handle sensitive information.

### Attensys.io - Berlin, Germany

2022

#### Data Administration

- Worked with public and private data, ensuring my conduct was professional and sensitive to the Data Protection Act.
- Worked with a system I was less familiar with to create interactive reports, gaining valuable skills and furthering my knowledge.
- Used my language skills to work as part of a multicultural, multilingual international team.
- Identified key trends and insights from complex information to support effective decision making.
- Presented information clearly and accessibly using custom-built visual reports, demonstrating strong communication and attention to detail.

### B&Q -Leicestershire, UK

2025 - Present

#### Customer Advisor

- Follow precise, repeatable processes to mix custom paints, ensuring accuracy and consistency across all outputs.
- Trusted with responsibility for operating machinery (Forklift, WUPE and PPT ), selected based on reliability and performance.
- Prioritise customer needs in a fast-paced environment, adapting workflows to handle interruptions while maintaining task completion.
- Consistently manage high workloads and competing priorities under tight and often challenging deadlines.
- Provide tailored solutions for customers by assessing individual project requirements and recommending appropriate products and processes.
- Resolve complex customer issues, while maintaining professionalism and customer satisfaction
- Build strong relationships with customers and colleagues through clear communication and dependable support.
- Recognised through positive customer feedback for service quality and problem resolution.

## Projects

### AI Email Automation System – Python, APIs, SQL

- Designed and implemented a lightweight SQLite database to track processed email threads, including schema design, query based filtering, and duplicate prevention.
- Designed and built an automated email processing system using Python, Gmail API, and OpenAI.
- Worked with real-world unstructured data and built logic to handle variability.
- [Github Link](#)

### Fluid Simulation System (C++, Data Processing, Performance)

- Developed a particle-based fluid simulation using custom algorithms inspired by SPH.
- Focused on performance optimisation and efficient handling of large datasets.
- Designed systems to collect, organise, and process simulation data.
- Applied mathematical modelling and numerical methods to validate results.
- Generated visualisations and analysed results to evaluate system behaviour.
- [Github Link](#)

### Backend & Cloud infrastructure Exploration (Ongoing Personal Development)

- Exploring cloud platforms (AWS, Azure) with interest in deployment, scalability, and system architecture.
- Learning database fundamentals including data persistence, querying, and efficient data handling.
- Taking Udemy Course "Ultimate ASP.NET Core Web API Development Guide"
